Glossary

Abbreviation	Description
ADHA	Australian Digital Health Agency
CS	Clinical System(s)
DHS	The Department of Health Services
HTS	Health Technology Services
HIPS	Healthcare Information Provider Service
LIS	Laboratory Information System
MHR HIPS UI	My Health Record HIPS User Interface
MHR	My Health Record
NIO	National Infrastructure Operator
PAS	Patient Administrative System(s)
PCEHR	Personally Controlled Electronic Health Record
PFML	Patient Friendly Medication List
PSML	Pharmacist Shared Medicines List
RIS	Radiology Information System
SWAD	State-wide Active Directory
VPHS	Victorian Public Health Organisations including, Hospitals, Community, Aged Cares

Contact

Users are encouraged to raise a service request via HTS Service Desk (ASM ticket) if they would like further investigation on the data or no relevant information found via the HIPS Exception/Self Reporting Tool.

Other enquiries can reach the application owner Di (dianne.linnell@htsv.org.au) or Jin (jinhung.seo@htsv.org.au) via email.

1. Overview of HIPS and Exception/Self Reporting Tool

National Identification services are a set of online tools that allow authorised users to verify an identity of patients or individuals. One of the applications of these services is to perform an Individual Health Identifier (IHI) query using the HIPS middleware system, which enables health professionals to access the IHI and electronic health records of their patients. This can improve the quality and safety of health care, as well as reduce costs and inefficiencies. The Exception/Self-Reporting tool is an essential feature designed specifically for Victorian agencies, enabling them to generate statistical reports regarding the successful or failed upload of documents to a patient's My Health Record (MHR). In instances of upload failure, this tool identifies exceptions or errors, providing valuable insight to prevent recurrence and enhance success rates in future uploads.

2. Purpose

The purpose of this document is to provide agencies within Victoria a guide on how to search for errors within the exception/self-reporting tool and how to troubleshoot these reported errors. The key purpose of the tool is to display statistical information while giving agencies the ability to improve data quality and improve data integrity as the information will become more widely available in the MHR. This report was developed to enable health agencies to self-manage and where applicable, remediate issues with documents that have failed to be uploaded to a patient's MHR. Uploaded documents from Health Services such as discharge summaries, patient friendly medicine lists (PFML), pharmacist shared medicine lists (PSML), pathology and diagnostic imaging results will be included in these error reports.

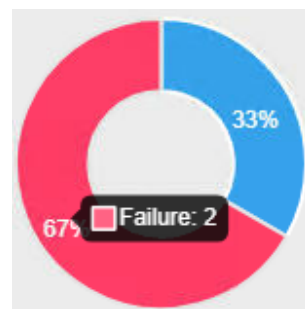

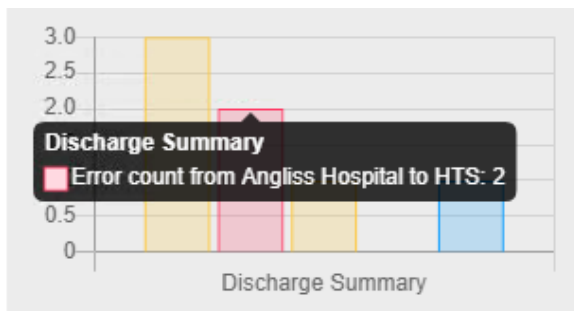

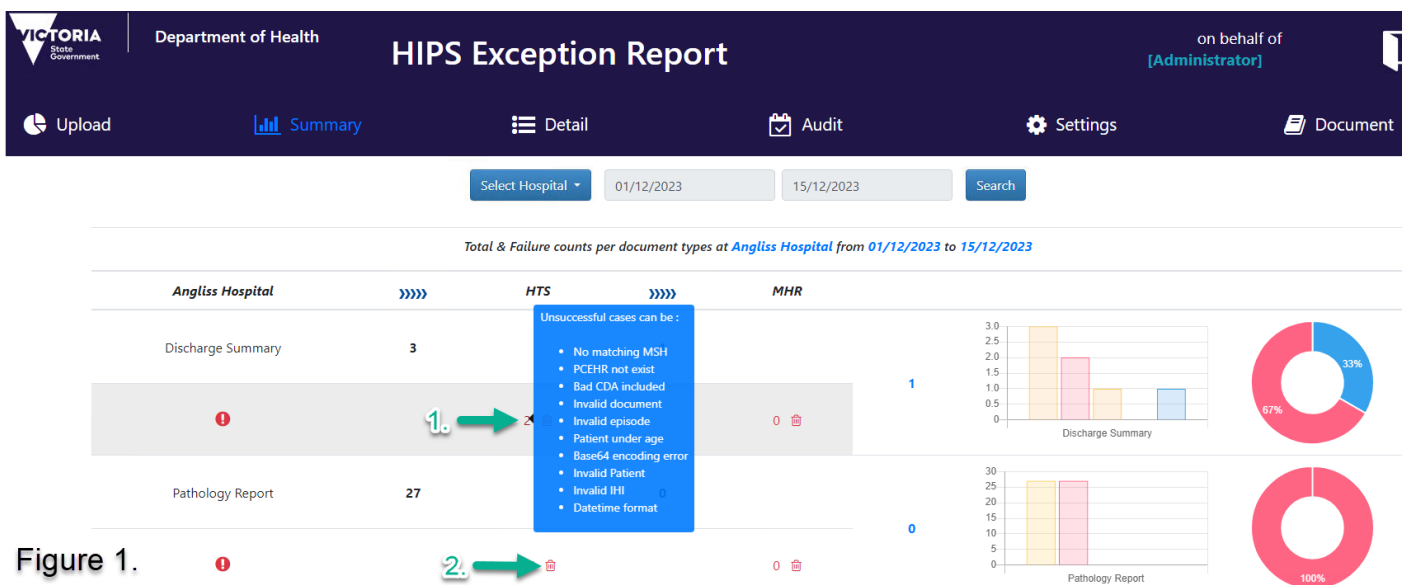

3. Access to the HIPS Exception/Self Reporting tool

To access the relevant Environment, simply click on the provided link and log in using your username and password. If you already have a SWAD account assigned, you can conveniently use your SWAD ID as the username. However, please note that your password for this environment is independent of your SWAD password. You can manage your user password by accessing the Settings menu after signing in.

Environment	Web Service URL
PROD	https://hipsreport.prod.services/report/login
NON-PROD	https://hipsnreport.prod.services/report/login

4. Overview of Summary Report

The Summary Report screen will provide summary of the delivery statuses of messages from the documents that your agency has sent to MHR. This report breaks down the total figures into several stages with success and failure rates. The report will also generate bar and pie graphs to represent the success and errors that has occurred with the upload of the agencies' upload to MHR (Figures 2 & 3). Users can hover over the number (highlighted in red, in Figure 1; number 1.) with the cursor and it will populate the general error reason based on historical data. The red bin (Figure 1; number 2.) when hovered over will show the number of errors that are out of HTS and the agencies' control (i.e., Health agencies typically do not need to address these issues, for example they are related to network connectivity problems.).

5. Overview of Detailed Error Report

The Detailed Error Report reaches into the HIPS & HSIE database to provide a detailed view of the message failures. The metadata is provided for the patient's records being uploaded to MHR the report is a 'Exception Details' HIPS explanation, this section (Figure 4; numbered 1.) can be hovered over to show the full details of the error. There are some additional features on this page where the user can type and filter in the search field (Figure 4; number 2.) the patient's name, MRN, Date of Birth (DOB) and other details of the admission. Users can also filter in either ascending or descending order based on the date, document type, gender, exception details, admission date, episode, name, MRN and DOB by clicking on the arrows next to the respective fields (Figure 4; number 3. Shows the filter for "Admissions"). The detailed exception error report can be exported to CVS, PDF or Excel files or copied directly onto the user's clipboard (Figure 4; number 4.).

The last column is the envelope icon named "Msg" which provides agencies with the ability of retrieving the original HL7 message for their internal troubleshooting (Figure 4; number 5.).

6. Type 1A/PDF Discharge Summary Errors

The following are commonly seen error messages reported from the HIPS exception tool for 1A/PDF discharge summaries, details of potential issues and suggested actions for agencies to troubleshoot these issues.

Exception Details Error Message	Potential issues causing this error	Suggested Agency Actions:
Error: HipsErrorMessage::No IHI was found for this patient and so the My Health Record cannot be accessed. ; Status::InvalidIhi	Not finding an IHI can be related to not enough required patient identifiers: - E.g., PID fields are missing. - E.g., No Medicare - E.g., Missing DOB Address is not filled out to completion. E.g., State is missing.	Review required fields of the Interface Agreement (IA) for 1A/PDF Discharge Summaries. Review that these fields are filled out to completion and/correctly in accordance with the IA.
Error: Message::One or more validation errors were encountered in the request message., GivenNames: The length of the value must fall within the range "1" (Inclusive) - "80" (Inclusive). ;	Not enough or incorrectly filled out required patient identifiers may be the cause of this issue. - E.g., PID fields are missing (value of less than 1) or incorrectly filled out (value exceeding 80).	Review required fields of the Interface Agreement (IA) for 1A/PDF Discharge Summaries. Review that these fields are filled out to completion and/correctly in accordance with the IA.
Error: Message::Episode not found. ; Type::Episode	This issue may occur if there is an admission and episode mismatch, where the HSIE cannot find the correct episode to this current admission. Admission date needs to be the same as the ADT message.	Agency to check whether the admission dates are the same with the sending program/system.
Error: HipsErrorMessage::There is an unresolved alert of type 'Address Mismatch' for this patient. My Health Record cannot be accessed until this alert is resolved. ; Status::UnresolvedIhiAlert	This issue may occur if there is an address mismatch. This may be caused when the address field has not enough or incorrectly filled out required fields may be the cause of this issue. - Address is not filled out to completion. E.g., State is missing.	Review required fields for address identifying fields of the Interface Agreement (IA) for 1A/PDF Discharge Summaries. Review that these fields are filled out to completion and/correctly in accordance with the IA.

Exception Details Error Message	Potential issues causing this error	Suggested Agency Actions:
Error: HipsErrorMessage::One or more validation errors were encountered in the request message., LocalIdentifier: The length of the value must fall within the range "1" (Inclusive) - "40" (Inclusive), LocalIdentifier : The length of the value must fall within the range "1" (Inclusive) - "40" (Inclusive). ;	Not enough or incorrectly filled out required fields may be the cause of this issue. E.g., OBX fields are missing (value of less than 1) or incorrectly filled out (value exceeding 40).	Review required fields of the Interface Agreement (IA) for 1A/PDF Discharge Summaries. Review that these fields are filled out to completion and/correctly in accordance with the IA.
Error: HipsErrorMessage::One or more validation errors were encountered in the request message., Specialty: The length of the value must fall within the range "1" (Inclusive) - "1024" (Inclusive). ;	Not enough or incorrectly filled out required fields may be the cause of this issue. E.g., PV1 fields are missing (value of less than 1) or incorrectly filled out (value exceeding 1024).	Review required fields of the Interface Agreement (IA) for 1A/PDF Discharge Summaries. Review that these fields are filled out to completion and/correctly in accordance with the IA.
Error: HipsErrorMessage::Discharge Summary has not been sent to the My Health Record for the child under 18 due to local policy. ; Status::PatientUnderAge	Based on agency settings, they may choose to have the age of consent for document upload to be 18 years old. If the patient is under the age of consent (i.e., 18 years old) data will not be uploaded to the MHR under local policy.	This local policy is working as expected if the agency has set an age of consent for document upload and therefore may not be a true 'error'. Agency to check if this local policy is in place for their agency.
Unacceptable Message Received ERR ^^309&Error - Required field missing Group/ObservationRequest[0]/OBX/ObservationIdentifier.	Invalid or incorrectly filled out required Observation Results (OBR) segments and may be the cause of this issue.	Review that these fields are filled out to completion and/correctly in accordance with the IA and the Unified Standard.
Error: Message::One or more validation errors were encountered in the request message., FamilyName: The length of the value must fall within the range	The supplied data in certain segments are incorrectly filled out (i.e., exceeding the maximum characters) or are invalid which may be the cause of this issue.	Review that these fields are filled out to completion and/correctly in accordance with the IA and the Unified Standard.

Exception Details Error Message	Potential issues causing this error	Suggested Agency Actions:
"1" (Inclusive) - "80" (Inclusive).,GivenNames: The length of the value must fall within the range "1" (Inclusive) - "80" (Inclusive).		
Unacceptable Message Received ERR ^^^311&Non Compliant ASCII Character Found	The supplied data in certain segments are invalid (i.e., None – ASCII character) which may be the cause of this issue.	Review that these fields are filled out to completion and/correctly in accordance with the IA and the Unified Standard.
Error: HipsErrorMessage::The patient with MRN [Insert Number] at facility [Facility Number and Name of Health Organisation] was not found in the HIPS database. ; Status::InvalidPatient	Invalid or incorrectly filled out required Observation Results (OBR), Patient Identifiers (PID), Patient Visit (PV1) and/or other segments and may be the cause of this issue.	Review that these fields are filled out to completion and/correctly in accordance with the IA and the Unified Standard.
Medicare/DVA Change Mismatch' for this patient. My Health Record cannot be accessed until this alert is resolved. ; Status::UnresolvedIhiAlert	Invalid or incorrectly filled out required Patient Identifiers (PID) and/or other segments and may be the cause of this issue.	Review that these fields are filled out to completion and/correctly in accordance with the IA and the Unified Standard.
The IHI for this patient is retired and cannot be used to access the My Health Record. ; Status::InvalidIhi	This policy may exist for patients who are deceased and therefore their data will not be uploaded to the MHR under local policy.	This local policy is working as expected and may not be a true 'error'. Agency to check if this local policy is in place for their agency.
Address not found. ; Type::Address	Invalid or incorrectly filled out required Patient Identifiers (PID) and/or other segments and may be the cause of this issue. There may be a mismatch in PAS, MHR and CS address information that do not line up.	Review that these fields are filled out to completion and/correctly in accordance with the IA and the Unified Standard.
Error: HipsErrorMessage::The patient has withdrawn	Superficially, this appears that the patient has since withdrawn consent, however this is a rare	Agency to review consent withdrawing procedure. Consent documentation may potentially

Exception Details Error Message	Potential issues causing this error	Suggested Agency Actions:
consent to upload this document ; Status::ConsentWithdrawn	occurrence particularly if the agency has more than 10 error messages like this. A more likely reason, patient's consent settings are not correct within the agency PAS's system which lead to the messages firing on top of each other.	be an issue from the start in the way the messages are sent and thus leading to HL7 messages firing on top of each other causing this error. It is rarer to have consent settings changed, however, the agency should run an audit within their PAS system to check if patient has changed in their consent settings.
HipsErrorMessage::There is an unresolved alert of type 'Demographic Mismatch' for this patient. My Health Record cannot be accessed until this alert is resolved. ; tatus::UnresolvedIhiAlert	Identifiers are not properly populated as per the Unified Standard.	Review that these fields are filled out to completion and/correctly in accordance with the IA and the Unified Standard.

6.1 Type 1A/PDF Discharge Summary Error Samples

Please Note: Details missing from the source message are not the necessarily the cause of the HIPS self-reporting tool error message, further review is needed of the original ADT message sent to HIPS. For example: If there are missing details in the PID (Patient Identifiers) segment, then the agency needs to review PAS and ensure that patient demographic details are correct.

Error Message Samples	Suggested Agency Actions:
Error: HipsErrorMessage::No IHI was found for this patient and so the My Health Record cannot be accessed. ; Status::InvalidIhi	
MSH ^~\& CPF 1280 HSIE 1280 20231117041931 REF^I12 188121 P 2.4 AL NE 61 PID 1 3471541^^^1280^MR Smith^Jane^^^^L 20230725 F 100 MADE UP Road^^Melbourne^ MISSING STATE ^3000 1234567891^PRN^PH OBR 1 2023081132877 DS 20231117041927 20231117041927 20231117161927 F OBX 1 ED PDF^Disply Format in PDF^AUSPDI ^APPLICATION^PDF^BASE64^JVBERi PAYLOAD CONTENT== F 20231117041927 12345A^DR SURNAME^JANE	Please Note: If there are missing details in the PID (Patient Identifiers) segment, then the agency needs to review PAS and ensure that patient demographic details are correct. Not finding an IHI can be related to not enough required patient identifiers: ○ E.g., PID fields are missing. ○ E.g., No Medicare ○ E.g., Missing DOB ○ E.g., Address is not filled out to completion.

Patient originally did have an IHI, then received ADT update with changes to some patient demographic details. HIPS must revalidate IHI with new details, but the Medicare and IHI services cannot find these new details. Agency needs to correct the patient demographics in their PAS. The hierarchy of checking starts with Medicare checking the patient's demographics then resorting to cross matching the address, but this could lead to a mismatch. A query needs to go to Medicare eventually. This message is incomplete as it is also missing the PV1 (Patient Visit) segment and OBX -16 (Responsible Observer) field that are required for this agency

Patient may originally have an IHI uploaded to HIPS, then received ADT update with changes to some patient demographic details. The detail of the patient needs to be compliant with Medicare and HIPS system that accesses these Medicare records. The HIPS system must be compliant and follows certain set of guidelines. One of those is to do with how the system will revalidate a patient's IHI. So, if certain details of the patient (i.e., demographics) change, regardless of how recently the agency retrieved the patients, if the IHI of the patient, date of birth, or Medicare number, or surname changes, the agency must revalidate the IHI using those new details. If the Medicare IHI services cannot find these new details; agency needs to correct the patient demographics in the PAS.

7. Type CDA 3A Discharge Summary Errors

The following are commonly seen error messages reported from the HIPS exception tool for CDA 3A discharge summaries, details of potential issues and suggested actions for agencies to troubleshoot these issues.

Exception Details Error Message	Description	Suggested Agency Actions:
Error: HipsErrorMessage::No IHI was found for this patient and so the My Health Record cannot be accessed. ; Status::InvalidIhi	Not finding an IHI can be related to not enough required patient identifiers: E.g., PID fields are missing. E.g., No Medicare E.g., Missing DOB Address is not filled out to completion. E.g., State is missing.	Review required fields of the Interface Agreement (IA) for 1A/PDF Discharge Summaries. Review that these fields are filled out to completion and/correctly in accordance with the IA.
Error: HipsErrorMessage::There is an unresolved alert of type 'Address Mismatch' for this patient. My Health Record cannot be accessed until this alert is resolved. ; Status::UnresolvedIhiAlert	This issue may occur if there is an address mismatch. This may be caused when the address field has not enough or incorrectly filled out required fields may be the cause of this issue. - Address is not filled out to completion. E.g., State is missing.	Review required fields for address identifying fields of the Interface Agreement (IA) for 1A/PDF Discharge Summaries. Review that these fields are filled out to completion and/correctly in accordance with the IA.
Error: HipsErrorMessage::Cannot remove document because the patient has no uploaded document or pending upload with set ID [Set ID Number] ; Status::InvalidEpisode	There is missing information in particular segments. This could be due to missing or incomplete: PV1 segment OBX Segment PID segment Leading to a misalignment of ADT messages from PAS and the EMR.	Review that these fields are filled out to completion and/correctly in accordance with the IA and ensure these matches with the encounter and episode between the PAS and EMR.
Error: ResponseCode::XmlException ; HipsErrorMessage::Invalid CDA Document ; ResponseCodeDetails::Invalid character in the given encoding. Line 1,	The My Health Record service specifies that CDA documents to be uploaded must use UTF-8 encoding. Cerner Millennium encodes their documents and generate with ISO/IEC 8859-1, which overlaps with UTF – 8 code points for a lot of characters. But outside of the first 128 (ASCII code	Agency should be translating the UTF-8 encoding.

The HIPS would check for consent status as a first point of the workflow. This issue may occur if there is a pathology report date and time and episode mismatch, where the HSIE cannot find the correct episode to this current pre consented pathology report. The report's date and time needs to be the same as the sending ADT message. In this example, the Date/Time of Transaction is incorrectly or not filled out, therefore the HSIE cannot match this with a pre consented episode. Other agency specific fields: E.g.; ORC-9 (Date/Time of Transaction) needs to be filled in as required field for this particular agency. E.g.; OBX-3-4 (Overall report Identifier) needs to be filled in as required field for this particular agency.

In this example, the PID-11 field has multiple addresses recorded that exceeded the maximum length for this field that is accepted by HSIE. In particular, the subfield after ITALY should be a state code (maximum length is 10 characters) and therefore this message breaches this validation. This message is also incomplete and missing the OBX (Observation Request) segment which is a required field for this agency.
Error: Message::One or more validation errors were encountered in the request message., Message rejected, message contains unrecognised patient gender code '9'. ;

In this example, the PID-11 field has multiple addresses recorded that exceeded the maximum length for this field. Ideally, to validate the message it is optimal to have 1 valid address. In this example, the street address is longer than 100 characters long which invalidates the PID-11 field. Other agency specific fields: E.g., ORC-9 (Date/Time of Transaction) needs to be filled in as required field for this agency. Eg., Many required OBR fields such as OBR - 16 (Optional), OBR-22, OBR-24, OBR-25, OBR-27, OBR-32 and the entire OBX segment is missing. These are all required to send a successful ORU message to the HSIE.

9. ADT Errors

The following are commonly seen error messages reported from the HIPS exception tool for ADT messages, details of potential issues and suggested actions for agencies to troubleshoot these issues.

Exception Details Error Message	Potential issues causing this error	Suggested Agency Actions:
[ERROR] NotifyPAS Invalid Response Received ^HL7 message may contain potentially dangerous HTML (< character detected in unusual context).	This issue is due to a special character that does violates the codes of the ADT message prevents the HSIE from reading the message.	Agency to review where the special characters that violates the codes of the ADT message, in this case identify the "<" character within the ADT message and any other incorrectly filled or missing required fields.
Error: Message:: One or more validation errors were encountered in the request message., Invalid Medicare Number was provided ;	Not enough or incorrectly filled out required patient identifiers (PID) may be the cause of this issue. E.g., PID fields for the Medicare card number may be missing or incorrectly filled out. Note: Other PID fields and other fields within different segments may be the cause of the error as well.	Review required fields of the Integration Agreement (IA) for ADT messages' Required Fields. Review that these fields are filled out to completion and/correctly in accordance with the IA.

Exception Details Error Message	Potential issues causing this error	Suggested Agency Actions:
Error: HipsErrorMessage::No IHI was found for this patient and so the My Health Record cannot be accessed. ; Status::InvalidIhi	Not finding an IHI can be related to not enough required patient identifiers: E.g., PID fields are missing. E.g., No Medicare E.g., Missing DOB Address is not filled out to completion. E.g., State is missing.	Review required fields of the Interface Agreement (IA) for 1A/PDF Discharge Summaries. Review that these fields are filled out to completion and/correctly in accordance with the IA.
Error: HipsErrorMessage::The patient has withdrawn consent to upload this document ; Status::ConsentWithdrawn	Superficially, this appears that the patient has since withdrawn consent, however this is a rare occurrence particularly if the agency has more than 10 error messages like this. A more likely reason, patient's consent settings are not correct within the agency PAS's system which lead to the messages firing on top of each other.	Agency to review consent withdrawing procedure. Consent documentation may potentially be an issue from the start in the way the messages are sent and thus leading to HL7 messages firing on top of each other causing this error. It is rarer to have consent settings changed, however, the agency should run an audit within their PAS system to check if patient has changed in their consent settings.
[ERROR] NotifyPAS Invalid Response Received ^Insufficient precision in date of birth	Not enough or incorrectly filled out required patient identifiers (PID) may be the cause of this issue. E.g., PID-7 field for the date of birth may be missing or incorrectly filled out. Note: Other PID fields and other fields within different segments may be the cause of the error as well.	Review required fields of the Integration Agreement (IA) for ADT messages' Required Fields. Review that these fields are filled out to completion and/correctly in accordance with the IA.
[ERROR] NotifyPAS Invalid Response Received ^The supplied data for Title.Code exceeds the maximum length (10) for this field.	The supplied data in certain segments are incorrectly filled out (i.e., exceeding the maximum characters) or are invalid which may be the cause of this issue.	Review that these fields are filled out to completion and/correctly in accordance with the IA and the Unified Standard.

Exception Details Error Message	Potential issues causing this error	Suggested Agency Actions:
[ERROR] NotifyPAS Invalid Response Received ^HL7 message does not contain an MRN for the patient	Not enough or incorrectly filled out required patient identifiers (PID) may be the cause of this issue. E.g., PID fields for the Medicare card number may be missing or incorrectly filled out. Note: Other PID fields and other fields within different segments may be the cause of the error as well.	Review that these fields are filled out to completion and/correctly in accordance with the IA and the Unified Standard.

9.1 ADT Error Samples
