1. Introduction

1.1. Purpose

The purpose of this document is to guide health agency staff on how to use the HPI-I Look Up Management Tool and outline the high-level design for the Tool. The Tool allows health agencies to search for and identify the HPI-I quickly and efficiently. The tool has an intuitive user interface that enables searching by provider name and AHPRA number.

1.2. Executive Summary

The HPI-I lookup application facilitates health organisations in retrieving HPI-I information from Medicare, supporting clinicians. Users can perform single searches or batch searches, where a group of clinicians' information can be obtained.

HTS is developing a web application to streamline this process. The application features an intuitive UI for manual searches and allows users to upload CSV files for batch searches. The retrieved HPI-I information is displayed on the application screen. For batch searches, multiple HPI-Is are presented in a tabular structure, offering the option to export the data as CSV, MS Excel or XML files. This functionality assists health agencies in integrating the information with their legacy systems.

1.3. Background

The Australian Digital Health Agency (ADHA) has provided rolling, yearly exemptions for the previous 6+ years for the provision of HPI-I's for the upload of documents to My Health Record (MHR) from all of the Victorian Health Services. At this time, all documents that are processed and uploaded through the DH HIPS managed upload process using the HPI-I relaxed document upload (which allows for no providers HPI-I to be specified for treating clinician, author or destination).

The HPI-I exemption provided by the Australian Digital Health Agency (ADHA) will expire as further projects are developed that require the true and correct clinician details to be validated and cross checked with the Medicare service. Soon it will become mandatory for healthcare providers to obtain an HPI-I number.

To obtain an HPI-I number, health services must supply their Australian Health Practitioner Regulation Agency (AHPRA) registration number.

HPI-I numbers are required for healthcare agencies to send patient data, such as discharge summaries, radiology reports, medication prescriptions and lab results, that are uploaded to My Health Record. Without an HPI-I number included in the records, these records will fail with the introduction of mandatory HPI-Is. Obtaining HPI-I numbers is also an essential prerequisite for advancing electronic prescription (eScripts) capabilities and meeting other emerging digital health requirements.

To prepare for upcoming requirements, the Department of Health (DH) is developing a HPI-I Look Up Management Tool. This tool manages HPI-I numbers for health providers employed within Victorian public health services. The HPI-I Look Up Tool serves as a reliable, centralised source for validated provider identification data enriched with HPI-Is and other details.

The Healthcare Identifiers (HI) Service is a national system for allocating a unique healthcare identifier. Healthcare Identifiers help ensure consumers and healthcare professionals can have confidence that the right information is associated with the right individual at the point of care. There are three types of health Identifiers:

- Individual Healthcare Identifier (**IHI**) - for individuals receiving healthcare services.

- Healthcare Provider Identifier-Individual (**HPI-I**) - for healthcare providers. This number is allocated by Medicare and is different from the national registration number issued by AHPRA.
- Healthcare Provider Identifier-Organisation (**HPI-O**) - for organisations that deliver healthcare such as allied health clinics, general practice, hospitals, pathology, diagnostic imaging centres etc.

1.4. Audience

The intended audience for this document includes individuals representing health agency, key stakeholders and decision makers.

This document assumes that the audience are familiar with the referenced documentation, listed in the Related Document section of this document.

1.5. Risk Assessment

Risk	Potential impact	Mitigation strategy
Incomplete Adoption of HPI-I Identifiers	Data inaccuracies, compromised patient care. No data will reach My Health Record with incomplete HPI-I.	Start implementing the HPI-I Look Up Management Tool.
Removal of HPI-I exemption	Agency cannot upload documents to MHR as no one knows the process to obtain HPI-I access and health services lack updated information.	Provide agency with communications and presentation on required actions if HPI-I exemption is removed.
Agency failing to obtain AHPRA registration numbers.	Without AHPRA numbers, it's not possible to look up HPI-I	Provide full briefing and training presentation to the agency. Prepare them to utilise the AHPRA Look Up portal to validate clinician registration numbers

1.6. Project Support Contacts

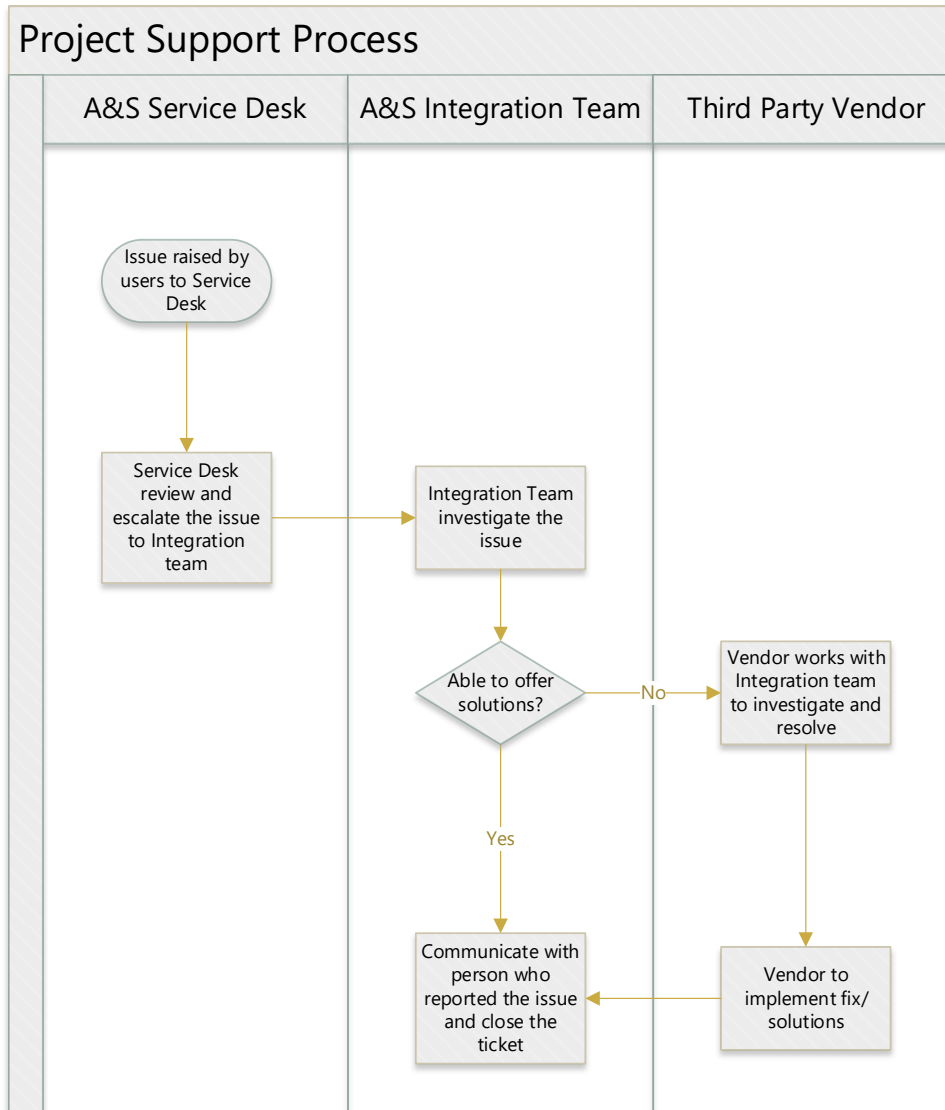

Name	Role	Phone number	Email address
HTS Service Desk	Help Desk	1300 551 690	servicedesk@htsv.org.au

1.7. Support Arrangement

Staff members are required to report and raise all issues/incidents to the AS Service Desk. The Service Desk team will work with the relevant support teams to identify and resolve the issues/incidents.

- Depends on the issue types, a new support category may be created within Alemba ticketing system.

1.9. Terms and Definitions

The following terms are used within this document.

Term	Description
Healthcare Identifiers (HI) Service	A national system in Australia that allocates unique healthcare identifiers to ensure the right information is associated with the right individual in healthcare settings.
Individual Healthcare Identifier (IHI)	A unique identifier assigned to individuals receiving healthcare services, helping in accurate identification and information association in healthcare records.
Healthcare Provider Identifier-Individual (HPI-I)	An identifier allocated to healthcare providers in Australia, distinct from national registration numbers, to facilitate accurate provider identification in healthcare systems.
Healthcare Provider Identifier-Organisation (HPI-O)	An identifier for healthcare organisations, including clinics, hospitals, and diagnostic centers, used to manage and streamline healthcare provider data.
HPI-I Look Up	An integration interface implemented by the Department of Health (DH) for managing external and internal providers in Victorian Public Health Services, centralising provider data.
Australian Digital Health Agency (ADHA)	An organisation responsible for coordinating digital health initiatives in Australia, including the management and use of healthcare identifiers.
My Health Record (MHR)	A digital health record system in Australia, where healthcare documents and information are stored, managed, and accessed by individuals and authorised healthcare providers.
Health Agency Clinician Repository	The central repository where vital clinician data is stored and managed, serving as the foundational source of information for healthcare providers.
Oracle Clinician Database	A relational database system utilised for storing and managing clinician details, employed by the HPI-I Look Up Web Application for data validation.
SOAP Web Service Queries	Communication protocols used by the Web Application to interact with external systems, such as the Healthcare Provider Identifier Service (HIPS) and Medicare Services, in order to obtain HPI-Is.
Healthcare Provider Identifier Service (HIPS)	A service responsible for validating clinician data, checking it against its own database, and performing web service queries to obtain HPI-Is, ultimately facilitating the enrichment of clinician profiles.

2. High level design and architecture

2.1. Overview

The HPI-I look up process utilises clinician data from the Health Agency's repository to obtain HPI-I numbers. Clinician details are validated, then queries are sent to HIPS and Medicare to retrieve HPI-I. These identifiers are used to supplement clinician profiles, which are updated in the agency's database via the Look Up Management Tool and Data Loader. This tool facilitates health agencies in acquiring, storing, and verifying HPI-I to support healthcare delivery and meet emerging digital health requirements for uploading patient records such as discharge summary, radiology results, lab results, etc. to MHR.

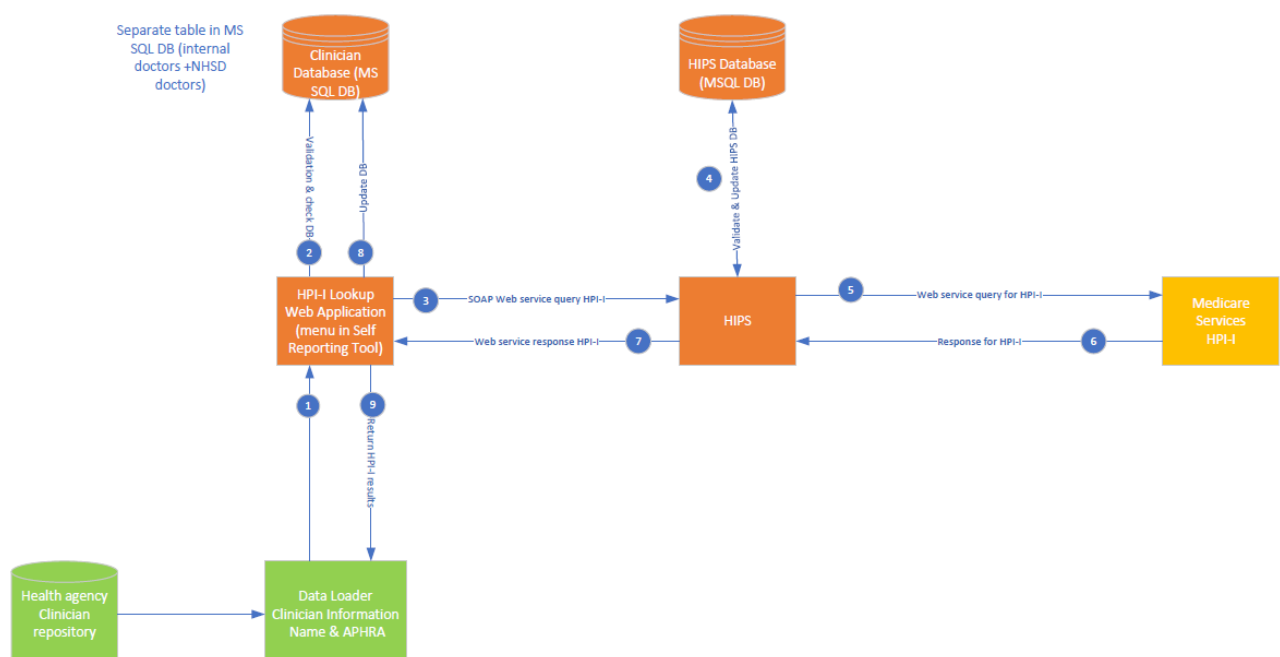

The required clinician details to look up HPI-I are:

- Clinician's first name and last name
- Clinician's AHPRA registration number, which can be found here:
<https://www.ahpra.gov.au/Registration/Registers-of-Practitioners.aspx#search-results-anchor>

There are two methods of looking up HPI-I:

- Single look up by providing clinician's first name, last name, or only last name.
- Batch look up via CSV file.

Illustration I Single Look Up

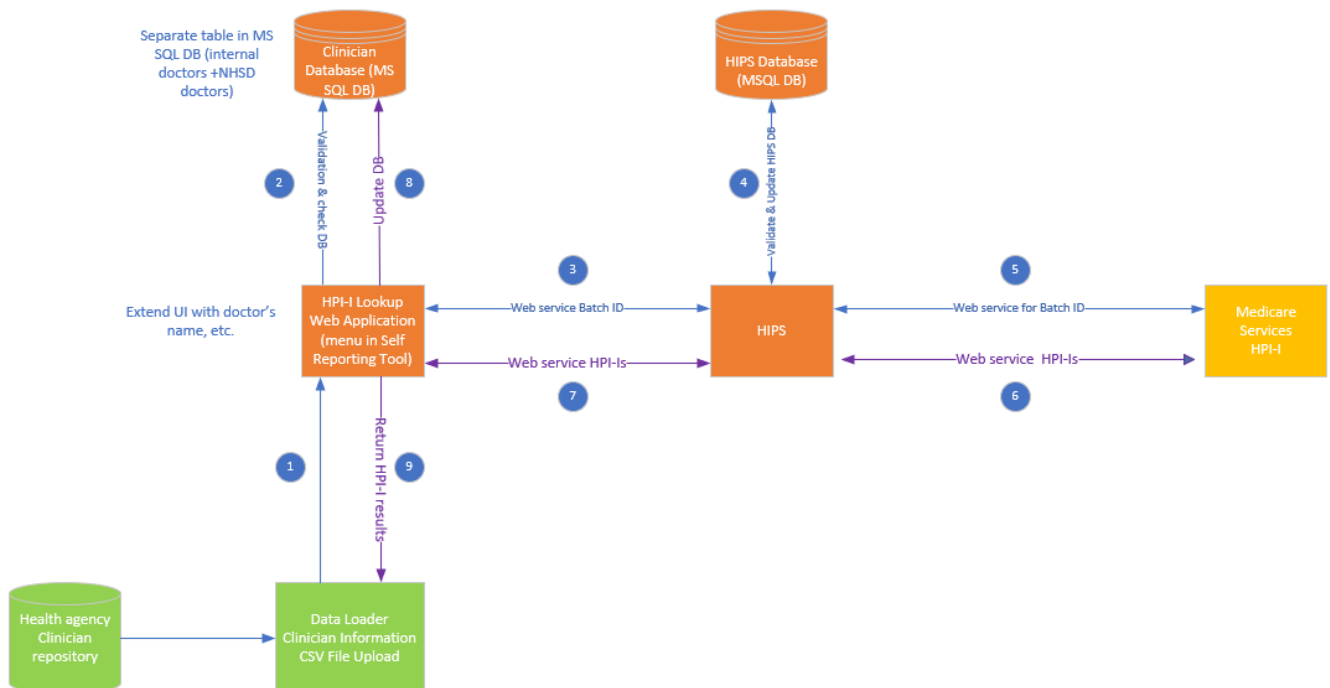

The diagram above depicts the process for looking up a single HPI-I data.

1. HPI-I look up initiated using required clinician's details (first name, last name and AHPRA number).

2. HPI-I look up management tool validates and check clinician's details against the Clinician Database.
3. HPI-I look up management tool performs web service query with HIPS via SOAP.
4. HIPS cross-check the information against HIPS database.
5. HPI-I data request send to Medicare services.
6. Medicare services retrieve and respond HPI-I data to HIPS. HIPS then update the HPI-I information in its database.
7. HPI-I data response and return to HPI-I look up management tool.
8. HPI-I look up management tool updates this data in the Clinician Database.
9. Final HPI-I result sent back to the requestor.

Illustration II Batch Look Up

The diagram above outlines the process to look up multiple clinicians HPI-I at once. Rather than perform a single HPI-I searches, health agency can upload a bulk CSV file containing credentials (first name, last name and AHPRA number) for many clinicians to look up.

1. Bulk upload is initiated via CSV file upload.
2. CSV data is validated in the Clinician Database.
3. HPI-I look up management tool performs batch ID web service calls via HIPS.
4. HIPS validates data in CSV file against its database.
5. HIPS requests a batch ID from Medicare services for processing an HPI-I request.
 - Medicare services will return Batch ID to HIPS.
 - HIPS will return the batch ID to the HPI-I Look Up Web Application.

- Using the batch ID, the HPI-I Look Up Web Application collects the HPI-I request details and send them to HIPS.
 - HIPS then submits the HPI-I request to Medicare services.
6. Medicare services return clinician HPI-I data via web service call. HIPS updates its database using the returned data.
 7. HIPS sends the returned data to HPI-I look up management tool via web services.
 8. HPI-I look up management tool updates the Clinician Database.
 9. HPI-I look up management tool return complete set of HPI-I results to requestor.

2.2. User Access Environment

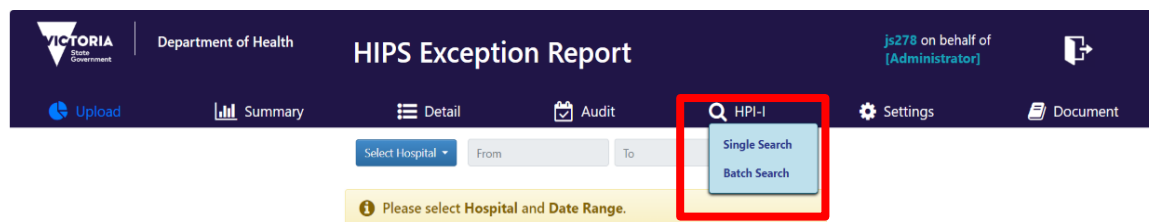

The HPI-I Look Up Management Tool is designed as a web application hosted by Health Technology Services (HTS), allowing for seamless user access. By leveraging HTS's hosting, users can utilise the HPI-I Tool directly through web browsers without undergoing any installation or configuration processes.

Users can simply launch any web browsers such as Chrome, MS Edge, Firefox or Safari and access the following URL within HealthNet.

- Non-Production: <https://hipsnreport.prod.services/report>
- Production: <https://hipsreport.prod.services/report>

3. Main Features (Screenshots for each section below)

3.1. Log into the HPI-I Look Up Management Tool

3.2. Single Look Up

The screenshot below displays by default for **Single Search** option. Once click on the **Get HPI-I** button, the result will appear.

- Users can also toggle on the **Single Name** button to search HPI-I number for practitioner **without first name**.

3.3. Batch Look Up

Below is the UI for **Batch Search**.

- Brief information on the format of CSV file: for info only.
- Simplified **CSV template** to download for users unfamiliar with CSV file format.
- Click on “**Choose file**” option after having the CSV file ready. If user is already **familiar** with CSV file, they can **skip step 1 and 2**.
- Click on **Upload** once ready.

The screenshot displays the 'HIPS Exception Report' interface. At the top, there is a navigation bar with the Victoria State Government logo, 'Department of Health', and the title 'HIPS Exception Report'. Below this is a menu bar with options: Upload, Summary, Detail, Audit, HPI-I, Settings, and Document. The main content area is titled 'Upload CSV File'. It features a text area labeled 'Fixed Header' with a CSV template: '1 LAST NAME, FIRST NAME, AHPRA NUMBER, PROVIDER NUMBER (OPTIONAL)', '2 COOPERLIN, Chad, DMR000000000001', '3 CARPENTER, Christine, DMR000000000002, EX10664132', '4 Terrell, DMR000000000000', and '5'. The text area is labeled 'Single name case'. To the right of the text area is a 'CSV Template' button. Below the text area is a 'Choose File' button. To the right of the 'Choose File' button is an 'Upload' button. A yellow banner at the bottom of the main content area contains the message: 'Please upload CSV file with Practitioner Information.'

Batch Search Results display in the screenshot below.

- Progress bar** indicates how many HPI-Is are retrieved **successfully**. In the screenshot below, **85%** was retrieved successfully.
- Table show **search results**. If status is **blank**, it means the search is **failed** for this practitioner. This may be due to incorrect AHPRA number or name, or not registered. In the screenshot below, it was due to incorrect AHPRA Number.
- HPI-I** column is **sortable** if users click on the small arrow button in the first column.
- Or they can use the **Search function** within the result window to search HPI-I based on any field within the table. That applies to ALL the results even on the subsequent pages.

Showing 1 to 10 of 26 entries

Previous 1 2 3 Next

C

Search results can be **exported** to various format such as **CSV, Excel or PDF**. Users can also use the copy function if they just need the result for certain practitioner in the list.

The screenshot displays the 'Upload CSV File' dialog box with a 'Fixed Header' section containing the following text:

```
1 LAST NAME, FIRST NAME, ALPHA NUMBER, PROVIDER NUMBER (OPTIONAL)
2 COUGHLIN, Thad, DHH0000000001
3 CARPENTER, Christine, DHH0000000002, EX10664132
4 CARPENTER, Christine, DHH0000000003
5
```

Below the header, there is a 'Single name case' section and an 'Optional' section. The 'Upload' button is visible.

The 'Batch HPI-I Lookup Page' results are shown in a table with the following columns: Last Name, First Name, Alpha Number, HPI-I, and Status. The table contains 26 entries, with the first 10 shown.

Last Name	First Name	Alpha Number	HPI-I	Status
COUGHLIN	Thad	DHH0000000001	8003613233384010	Active
CARPENTER	Christine	DHH0000000002	8003613233384020	Active

3.4. Online Documentation

User guide is attached under the document menu to share the latest version of documentations and centralise the resource at one spot.

4.HPI-I Adoption at Health Agency

All clinicians are required to register an AHPRA number which will be embedded in the database and uploaded to MHR. I.e. eScripts, discharge summary to get to MHR.

All healthcare professionals registered with AHPRA are assigned an HPI-I number. Currently pharmacists are required to provide their HPI-I number, in addition to their AHPRA number, during the on boarding process.
